

EBSCO Database Records and Endnote

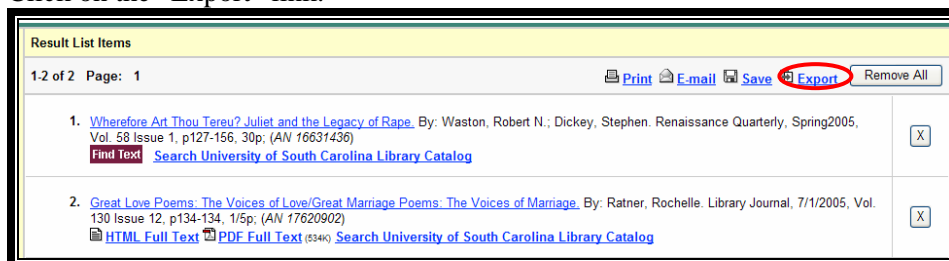

JG 03/07

To import records from EBSCO databases into Endnote, a search must be completed. After the desired results have been obtained follow these steps:

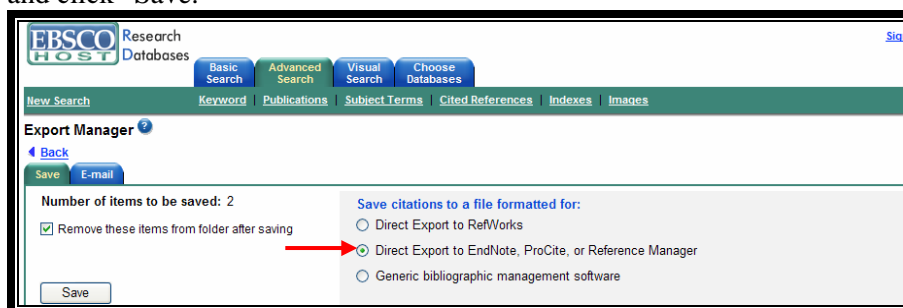

1. Add records to your save folder within the EBSCO database by using the “Add” icon in the right hand column of the results page.
2. After all of the desired records have been added to the save folder, click on the “Folder has items” link.

3. Click on the “Export” link.

4. From the Export Manager page, select “Direct Export to EndNote, ProCite, or Reference Manager” and click “Save.”

5. Clicking the “Save” button should launch your Endnote program. You should then select the Endnote library to which you want to save the citations. The citations will then be imported into your Endnote library.
